☑️ **Frequently Asked - Interview Questions**

1. What is Manage Package in UiPath?

The Manage Package option in UiPath Studio allows users to download activity packages and libraries. It also allows users to view and update the ones already installed for the project and add new packages which are required for the current project or remove them when not required. The Manage Packages window always shows up the Project Dependencies list when opened.

2. What are the steps involved in RPA Life Cycle?

Phase 1
Process Identification

Phase 2
Design Phase

Phase 3
Development

Phase 4
Testing/UAT

Phase 5
Deployment

Phase 6
